what we build

BARN HOMES – Our completely custom timber-frame barn homes are a blank canvas within which you can design your dream living space. Our unique exposed post-and-beam construction results in a space where walls can go wherever you choose. From rustic features to something finished with modern flair, your home will wear any personality with ease and offer phenomenal structural integrity.

STORAGE & LIVESTOCK BARNs – Honor the heritage of the American barn and add a sign of prosperity to your estate or farm with an eye-catching livestock barn, horse arena, workshop, garage, or shed. We have extensive experience balancing functionality with aesthetic appeal in our designs—you'll get a durable and practical space that makes you love your land even more than you already do.

EVENT BARNs – From wedding halls to wineries, clubhouses to lodges, with a barn-style event venue, you can create a space that makes a lasting impression. Post-and-beam construction allows for open interior spaces and completely customizable floor plans. We understand you're making a significant investment, and we're confident your venue will meet exacting quality standards.

barn styles

HOMESTEAD – A basic square shape. Easily adapted to a variety of uses. Popular for both small family farms and larger enterprises. Choose from single-story or story-and-a-half with a loft.

ROUND BARN – Our most unique barn. Authentic replication of American history built by George Washington. For a standout home like none other, choose a round barn.

IRON HORSE – Shallow roof pitch and soaring 16' walls. Ideal fit for event venues or spacious barn homes. Install tall windows to effortlessly showcase interior woods.

RAISED MONITOR – A raised ceiling above a center aisle. Combines adaptability with a striking appearance. Consider the raised monitor for a home and business combination space.

GAMBREL – Offers largest second-story loft capacity. Plenty of space for livestock fodder. Add several upstairs bedrooms or office or recreation space in your custom gambrel home.

OFFSET ROOFLINE – Two or more rooflines combined to offer endless design possibilities. Offers multiple points of entry. A perfect choice when defined spaces are desired.

what we do & how we do it

Barn Builders has been constructing barns and barn homes using the time-honored post-and-beam method for 30 years. For founder and CEO Bruce Willemsen, preserving the heritage of the American barn with each new project is a passion, not just a career.

When you work with Barn Builders, you can expect a personalized experience from the beginning of the design process through the build, which will be done by our full team of skilled carpenters. Or, if you prefer, we can partner with a contractor of your choice.

Post-and-beam, one of the oldest and most traditional methods of construction, is at the center of our building philosophy. Featuring a strong framework of posts that carry the entire structural load, our spaces are soaring and open. With post-and-beam, the possibilities are closer to endless than with any stick-built home.

We use only real wood timbers and add board and batten siding for solidity. And we never cut corners...ever.
